

EASYFOLD BATHROBE

FOLDING MACHINE FOR ALL TYPES OF BATHROBES

APPLICATIONS

The patented EasyFold Bathrobe is the first bathrobe folding machine on the market that can fold different bathrobes regardless of their dimensions, thickness or weight.

Folding bathrobes with the EasyFold Bathrobe can triple production rates compared to manual folding. This means the EasyFold Bathrobe pays for itself in six months or less. Even laundries that fold only a few hundred bathrobes a day can achieve a return on investment in under a year.

The EasyFold Bathrobe not only increases production, but also increases folding quality and consistency. Its ergonomic design and simplicity makes folding bathrobes easier than ever.

The EasyFold Bathrobe takes up only 1.70 m².

OPERATION

The bathrobe is placed on a special hanger. The operator moves the lightweight bathrobe holder from the side to the front of the bathrobe. The operator pulls the air slide downwards, moving the bathrobe from a vertical to horizontal position. During this movement, the hangers are automatically removed from the bathrobe. Once the bathrobe is in a horizontal position and the front of the item is stacked down, the operator can manually fold the sleeves so that the mechanical blades perform the folds. The side and cross folding blades are adjustable, so that both large and small bathrobes can be folded precisely.

The EasyFold Bathrobe only needs a little air and to be plugged into a normal power connection, and is immediately ready for operation and can be used anywhere in the laundry.

The EasyFold Bathrobe is shipped on a pallet and does not require a technician to instal.

EASYFOLD BATHROBE

FOLDING MACHINE FOR ALL TYPES OF BATHROBES

TECHNICAL DETAILS

Air pressure	5 bar		
Air consumption	<2m3/hr	Machine width	197 cm
Power	110-220HP	Machine height	199 cm
Power consumption	0.1 kWh	Machine weight	250 kg
No. of lines	1	No. of items per...	200 items/hr
Max. item length	160 cm		
Max. item width	75 cm		
Machine length	197 cm
